

```
package com.aop;

import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;
import org.springframework.web.context.support.WebApplicationContextUtils;

public class DemoA {
    public void demo(String name,int id){
        int i=1/0;
        System.out.println("正在执行Demo方法");
    }

    public static void main(String[] args) {
        ApplicationContext ac=new
ClassPathXmlApplicationContext("com/aop/applicationContext.xml");
        DemoA demo=ac.getBean("demo",DemoA.class);
        demo.demo("张三",123456789);

    }
}
```
