```java
package com.proxy.dynamicproxy;

import java.lang.reflect.InvocationHandler;
import java.lang.reflect.Method;

public class Secretary implements InvocationHandler {
    private Manager manager=new Manager("云云");

    @Override
    public Object invoke(Object proxy, Method method, Object[] args) throws
Throwable {
        System.out.println("预约时间");
        Object result = method.invoke(manager,args);
        System.out.println("记录访客记录");
        return result;
    }

}
```
